

Highway 29 E, Georgetown

R306976 | Williamson County, Texas | Generated September 18, 2026

CALCULATED PARCEL AREA

62.36 acres

Projected geometry | EPSG:32139

MAPPED SPECIAL FLOOD HAZARD AREA

8.77 acres

14.07% of subject parcel | Zone AE

MAPPED FLOODWAY

5.38 acres

8.63% of parcel | included in SFHA

Key findings

- Approximately 8.77 acres (14.07%) of the mapped parcel intersects FEMA Zone AE in the acquired NFHL snapshot.
- Mapped floodway accounts for 5.38 acres (8.63%) and is included within the special flood hazard area total.
- The accepted parcel geometry calculates to 62.36 acres; source records contain conflicting acreage fields that are retained separately.
- The report uses public GIS sources for preliminary screening and does not establish legal boundaries, current ownership, legal access, development feasibility or insurance requirements.

Property at a glance

Parcel / property ID
R306976 / 157942

Situs address
Highway 29 E, Georgetown, TX 78626

Source-reported owner
Southwestern University

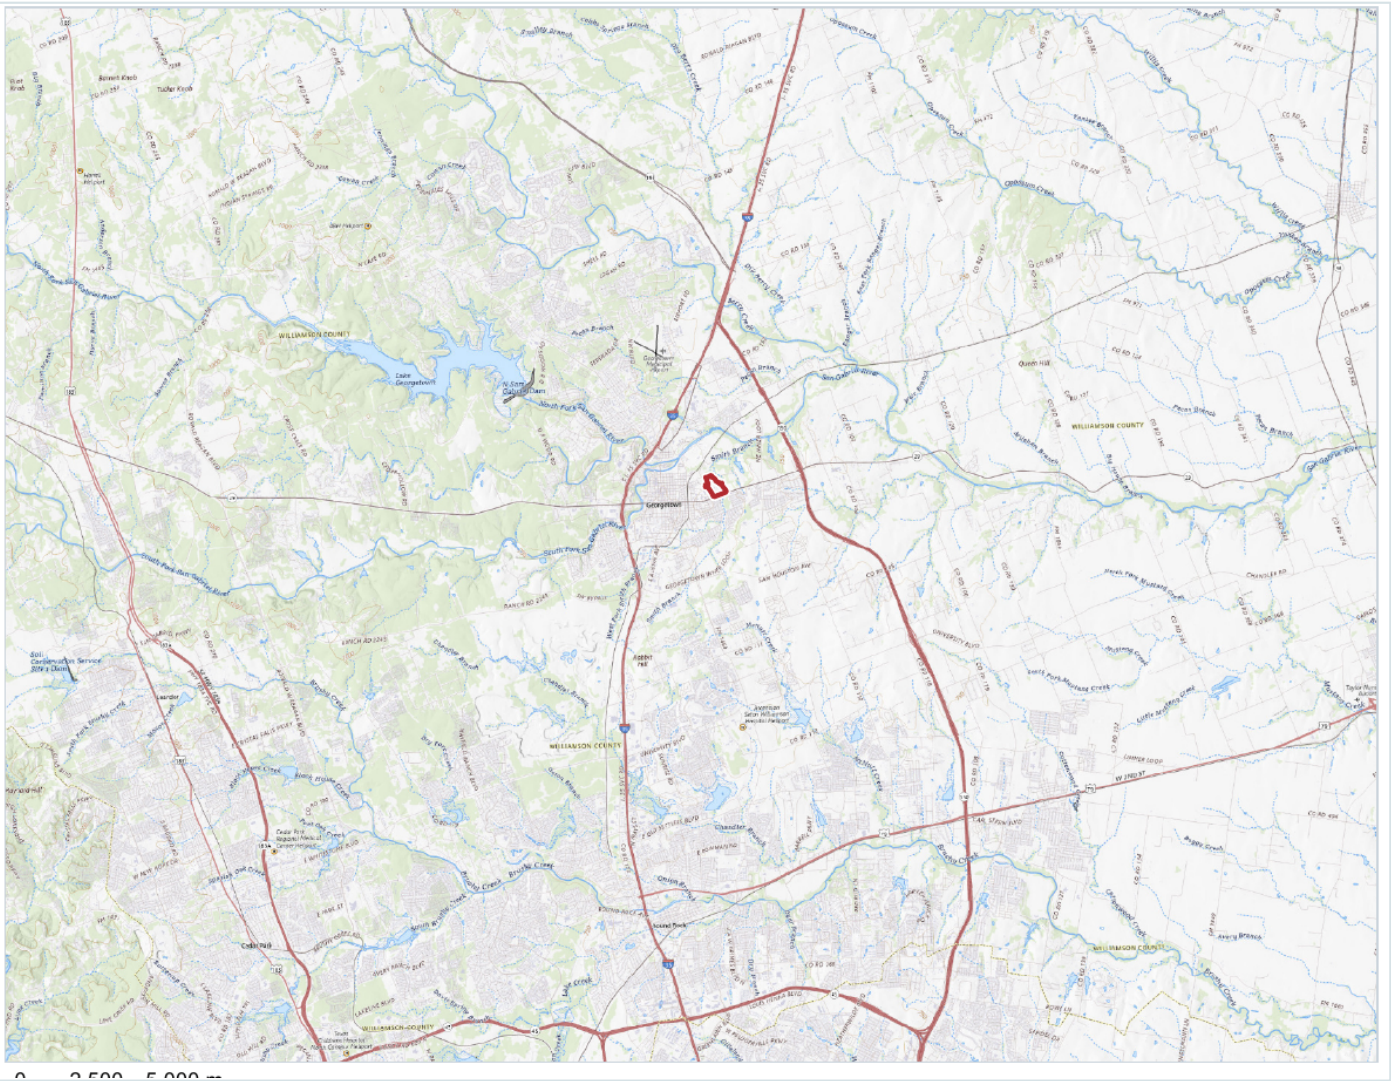

Source use classification
L - Land

Data quality note

GIS source acreage is 63.97 acres, calculated area is 62.36 acres, and the saved property page reports 236.736002 effective acres. These values are not treated as interchangeable. The discrepancy is preserved for follow-up rather than silently reconciled.

What this map shows

The subject parcel in regional context using USGS The National Map / USGSTopo. Regional roads and place names are provided for orientation only.

Scope note

Legal access is not evaluated on this page. The parcel outline identifies the accepted public-data snapshot geometry and should not be interpreted as a survey boundary.

Sources: Williamson Central Appraisal District; USGS The National Map / USGSTopo. Snapshot retrieved 2026-09-17.

Aerial and parcel boundary

R306976 | Georgetown, Williamson County, Texas

Parcel snapshot

CALCULATED AREA

62.36 acres

GIS source acreage: 63.97 acres

Imagery

SOURCE

USDA NAIP via USGS

ACQUIRED

June 8, 2022

NATIVE RESOLUTION

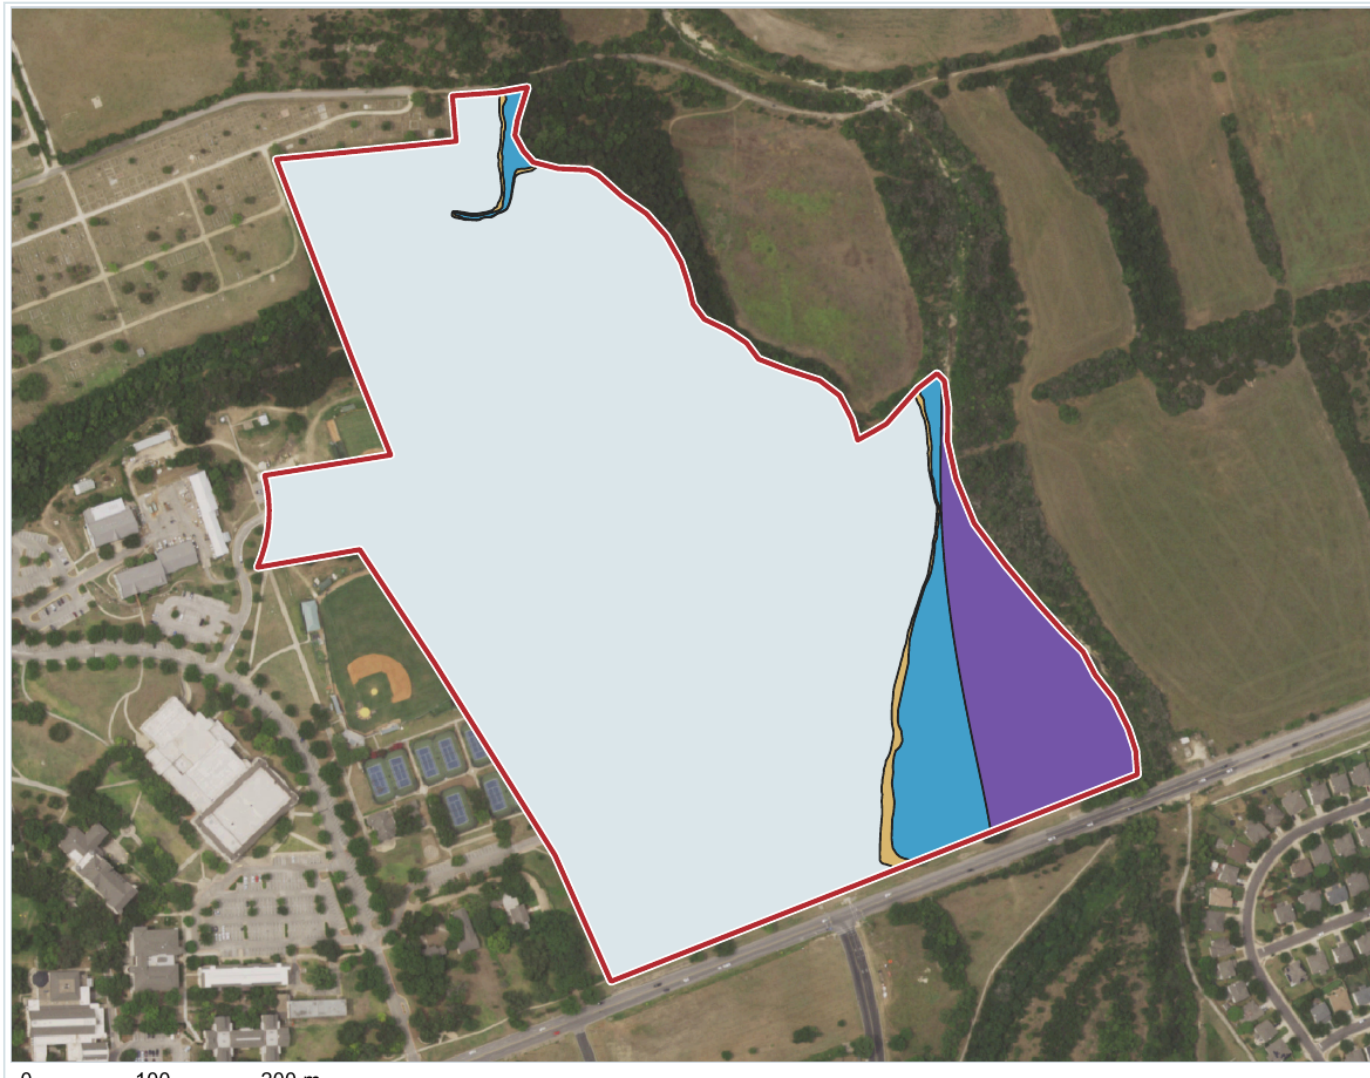

0.6 meter

Interpretation note

Imagery predates this report. The boundary is based on public GIS geometry and is not a survey. Conflicting acreage fields are documented on the property-details page.

Mapped FEMA flood conditions

R306976 | Georgetown, Williamson County, Texas

Mapped intersection

SPECIAL FLOOD HAZARD AREA

8.77 acres

14.07% of subject parcel

MAPPED FLOODWAY

5.38 acres

8.63% of parcel | included in SFHA

Mapped classes within parcel

Floodway (part of AE)
5.38 ac | 8.63%

AE outside floodway
3.39 ac | 5.44%

X: 0.2% annual chance
0.56 ac | 0.90%

X: minimal mapped hazard
53.02 ac | 85.03%

Important limitation

Floodway is part of the SFHA total and must not be added again. This is a mapped public-data screening, not an independent flood-risk, insurance, engineering or building-specific determination.

Property details and data quality

R306976 | Source facts, measured areas and retained discrepancies

Recorded property fields

WCAD parcel / property ID	R306976 / 157942
Owner in parcel snapshot	SOUTHWESTERN UNIVERSITY
Use code / description	L / Land
GIS source acreage	63.97 acres
Property-page effective acreage	236.736002 acres
Assessment / valuation	Unavailable - source values lack usable year context.

FEMA classes within parcel

MAPPED CLASS	ACRES	SHARE
AE - outside floodway	3.39	5.44%
AE - floodway	5.38	8.63%
X - 0.2% annual chance	0.56	0.90%
X - minimal mapped hazard	53.02	85.03%
Total mapped SFHA (union)	8.77	14.07%

Acreage discrepancy retained

The accepted parcel geometry calculates to 62.36 acres, while the GIS record reports 63.97 acres and the saved property page reports 236.736002 effective acres. The report does not infer how those fields relate. Current ownership, market value and tax liability are also not established from these archived fields.

Recorded fields are from the archived WCAD extract and saved official property page; FEMA class areas are calculated from the accepted spatial snapshot.

Sources, method and limitations

Source register

Williamson Central Appraisal District

Parcel extract checked against the official GIS response; exact subject geometry match. Official verification retrieved 2026-09-17.

WCAD property record

Saved property page used to retain the acreage discrepancy. Retrieved 2026-09-17. Account/acreage relationships are not inferred.

FEMA National Flood Hazard Layer

Availability, panel and hazard services. Hazard snapshot retrieved 2026-09-17. Panel effective dates are 2019-12-20.

USDA NAIP via USGS

Imagery acquired 2022-06-08; retrieved 2026-09-17. Current conditions are not inferred.

USGS The National Map / USGSTopo

Regional context service retrieved 2026-09-17. Constituent publication dates were not established.

Reproducible measurement

Parcel geometry (EPSG:4326) and FEMA hazard geometry (EPSG:4269) are transformed to NAD83 / Texas Central (EPSG:32139). Areas are measured in square meters and converted to acres using 4046.8564224 square meters per acre. Holes and multipart geometry are preserved. Qualifying FEMA polygons are dissolved before intersection; the SFHA is measured as the union of qualifying polygons and floodway is retained as a separate subset.

Interpretation limits

Boundaries are approximate. No survey, title, legal-access, engineering, insurance, building-specific flood or development-feasibility determination is made. Property-specific FEMA amendments have not been adjudicated. Absence of mapped SFHA does not establish absence of flood risk. Commercial source-use and redistribution review remains a separate requirement.

How to use this report

Use this report as an early-stage public-data screening tool: a fast way to understand the mapped property context, identify issues that deserve follow-up and organize source evidence before commissioning professional survey, title, engineering, environmental or insurance work.
